A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6-14-2010 has been entered.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1, 5-8, 10 and 11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The amendment to claim 1 renders its scope and meaning indefinite. Claims 5-8, 10 and 11 fail to remedy this deficiency. Claims must be construed in light of the specification from which they draw support. The scope and meaning of claim 1 is dependent upon the term "immediately". The *American Heritage Dictionary* defines the term as "without delay". It does not forbid intervening steps if they would not be judged to be a "delay". There is no evidence of record that one ordinary skill in the art would consider filtration and de-mineralization to be a "delay".

The instant specification teaches that an advantage of the instant invention is that "high recovery yields of different maltitol products are achievable by having the liquefaction, saccharification immediately followed by chromatograph[y]". The example

illustrating the current invention includes a step of concentration to 60% dry matter between the saccharification and chromatographic fractionation (Page 13, lines 2-3). Thus, in light of the specification, the term "immediately" in the instant claims does not exclude intermediate steps. The specification does not disclose which types of steps may occur between saccharification and chromatographic fractionation yet fall within the scope of "immediate". Furthermore, a strict interpretation of the term, excluding any passage of time between saccharification and chromatographic fractionation would exclude the necessary transport between the different pieces of apparatus.

Claim 7 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims. The prior art of record fails to teach or suggest mixing the crystalline maltitol intermediate product (D) with the liquid maltitol coproduct (E) or the fraction (G) to obtain a liquid product (H).
